

Design the Invisible!

COMFORTABLE, EVEN HEAT FROM CEILING TO FLOOR

Radiant Ceiling

HEATING SYSTEMS

RADIANT CEILING HEATING SYSTEMS ARE CONCEALED ABOVE YOUR CEILING, PROVIDING INVISIBLE, QUIET WARMTH THROUGHOUT YOUR HOME OR BUILDING.

Complete Design Freedom

ENTIRELY HIDDEN WITH NO DISTRACTIONS FROM THE BEAUTY OF YOUR LIVING OR WORKING SPACE

Comfortable **Create Warmth Anywhere**

Unlike forced air heating that forces the warm air to the ceiling, Radiant Ceiling heating provides an even heat from ceiling to floor. Less than a 2°-degree difference. Provides a comfortable even heat.

Effective **Heat People, Not Air**

Radiant heat warmly radiates in all directions and directly warms people and objects rather than air. Heat objects and people not air.

Flexible **Control Your Comfort**

Each room can be controlled individually to provide customized personal comfort. Individual zones provide you with design flexibility and more precise energy control.

Healthier **Reduce Allergen Flow**

Radiant Heat creates a cleaner and healthier environment with No blowing dust, pollens or other airborne contaminants.

Ambience **Quiet**

Unlike convection systems that produce undesired noise, electric radiant heating systems have no moving parts and operate quietly.

CONSISTENT AND CONCEALED

- ✓ Radiant Ceiling Panels are installed between floor joist or roof trusses.
- ✓ Each room is customized to your design, providing even heat throughout from wall-to-wall and ceiling-to-floor.
- ✓ Your Radiant Ceiling System is completely concealed behind the drywall.
