Tile  
Marble  
Stone  
Laminates  
Wood  
Engineered  
And more...

## The Contractor's Choice

CHOOSE YOUR RADIANT FLOOR WARMING SYSTEM THE SAME WAY PROFESSIONAL CONTRACTORS DO!

### Lowest Profile

*Insist on Low, Low, Low!* With the lowest profile in the industry, the small diameter of our cables (1/16" - 1/8") keeps your finished floor heights as low as possible.

### Total Flexibility

*Insist on Any Shape or Size!* A floor cable system should easily accommodate any shape or size room. Our cable kits are available in all voltages, range from 12 square feet to 275 square feet and can be combined to handle all larger areas.

### Thermostats

*Insist on Control!* Our radiant thermostat measures the ambient temperature rather than the air temperature, providing better operational performance and saving you money.

### Ultimate Reliability

*Insist on Single!* With our Single Conductor Cable System, you will enjoy warmth and comfort with the best overall long term solution for an embedded floor warming system.

### Fast, Easy Installation

*Insist on Plastic!* Your floor warming system includes plastic spacing strips which are easy to cut and affix to any floor. Installation is fast and easy as the strips have slots every inch to ensure your floor warming cable spacing is accurate. (Metal spacing strips and electric cables are not a good combination.)

### Superior Service

*Insist on All the Time Service!* Our technical support team can assist before, during and most importantly after the installation is complete.

GET THE ULTIMATE IN FLOOR WARMING AND ADD WARMTH TO ANY SPACE TODAY!

### Solve Any Heating Challenge

In addition to floor warming systems, ThermaRay also offers a range of complimentary electric radiant heating systems that include floor, ceiling, slab and snow and ice melting applications.
